MAKE THE RIGHT DECISIONS AT THE RIGHT TIME WITH THE SMARTEST CLOUD SOLUTION

The SAP-certified S/4 HANA Cloud solution package for the manufacturing industry

With clients who increasingly demand customisation, an ageing industry, servitisation, and the advent of innovative technology, the world of manufacturing is changing rapidly. The time has come to adopt a smart response. The S/4 HANA Cloud solution package for the manufacturing industry guarantees maximum efficiency and prepares production companies for the challenges of the future.

The smartest manufacturing companies maintain control over margins, planning, actual costing and inventory. They do so by focusing on manoeuvrability, delivery reliability, real-time insight and added customer value, and by maximising efficiency. In order to remain at the forefront in all these areas, they embrace technology and innovation.

The key role played by innovation and digitalisation

Nowadays, making decisions rapidly at the right time is crucial. This is often made more difficult by outdated ERP infrastructures, or ones that consist of multiple interconnected systems. Finding, retrieving, merging, processing and interpreting all the available data is time-consuming and prevents you from achieving real-time insight. Innovation and digitalisation play a key role in changing all this. That's where Ctac's S/4 HANA Cloud solution package for manufacturing comes in.

Acceleration through an intelligent cloud solution

Ctac's solution package offers organisations a system that provides employees with real-time insight into data from all business processes. This gives Chief Operating Officers the space to make strategic decisions instead of worrying about their ageing workforce. Planners waste less time collecting and interpreting data, and sales managers can generate a 360-degree view of their customers at any time.

The unique Ctac method

Ctac applies a unique method that allows the solution package to be implemented up to three times faster. Thanks to over 25 years of experience with SAP and in the field, Ctac's specialists have both in-depth and sector-specific knowledge of all areas of the manufacturing industry. Our unique combination of market knowledge and technological expertise ensures perfect coordination between business and IT.

In order to ensure a successful implementation, Ctac first examines whether the cloud solution is a good match for the business. By conducting a preliminary assessment of the strategy, processes, application architecture and the organisation itself, a defined IT project is created in which risks relating to adoption, budget and quality are minimised. In this way, manufacturing companies know exactly where they stand.

The S/4 HANA Cloud solution package for the manufacturing industry features:

- A defined IT project. This includes: fit to standard, backlog, best practices, configuration, training, master data load, testing, pre-go live, go live.
- Coverage of the most common business processes in the manufacturing industry.
- At starting price of 185 euros per user per month.
- Implementation with a lead time of 16 weeks.
- Post-implementation value creation, with support from Ctac.

THE BENEFITS OF THE SMARTEST CLOUD SOLUTION:

- A smart I-ERP in the **SAP Public Cloud** resulting in **rapid implementation**, so you get up and running quickly!
- A standardised and above all **user-friendly solution** for the manufacturing industry. From young professionals to seniors, it's accessible to everyone.
- All data and expertise relating to every process in the manufacturing company are stored in **a single system**. This guarantees the transfer of knowledge.
- Future-proof and manoeuvrable: quarterly **updates and new functionalities** from the SAP Public Cloud with minimal IT involvement.
- The standardised base provides space for new functionalities to be adopted rapidly. This allows innovation and technological developments to **accelerate** within the organisation.
- The solution supports the day-to-day work of your organisation in an intelligent way. This frees up employees to focus on efficiency, smart solutions and innovation. The result? **Their work becomes more enjoyable.**
- **Real-time insight** enables employees to control, test, optimise and make predictions faster.
- **The ability to find the right information easily** and thus quickly generate a 360-degree view of the (end) customer.
